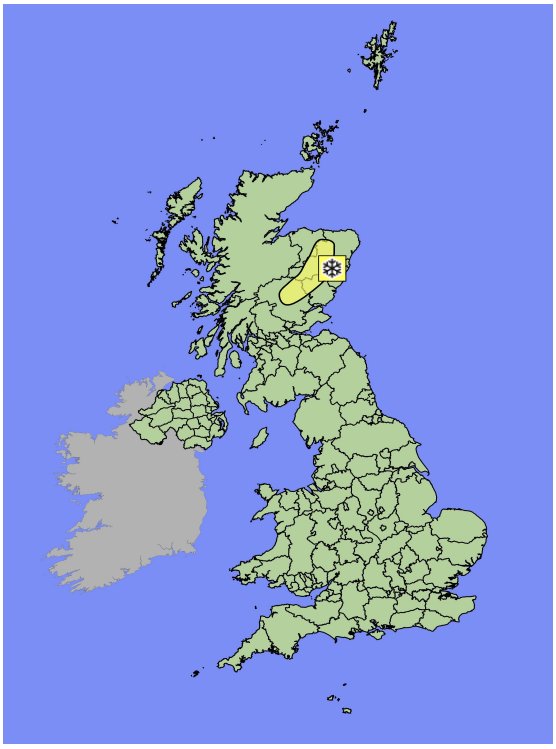
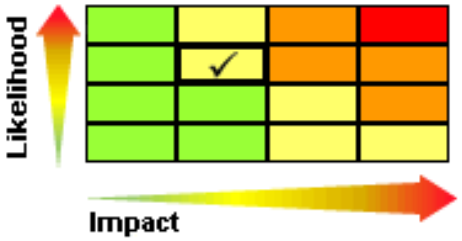
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone will be active where strong easterly winds meet the rising ground of eastern Scotland. At the same time increasingly cold air will cut beneath the front to give snow, levels decreasing overnight as precipitation begins to weaken.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **16:00 on Fri, 08th Mar 2013** until **06:00 on Sat, 09th Mar 2013**

Outbreaks of snow will affect higher ground in parts of East and Northeast Scotland through Friday afternoon and evening, lasting into the early hours of Saturday morning. Most of the snow will fall on ground above 400 m where 10 - 20 cm are possible, though as the snow level lowers during Friday evening and night, 5 - 10 cm may accumulate down to 300 m. Slight falls may settle to lower levels overnight before it dies out.

The public should be aware that travel disruption is possible especially on the highest roads. In addition strong easterly winds combined with wet snow may cause power cable icing.
